BristolPublisher

The simplest, yet most powerful and complete selector.
User defined selections are re-usable in all reports.

BristolReport Selector lets the user focus rapidly on products, customers, geographies or any other dimension members to be displayed in a report.

A complete range of selection types are available:

- Picking from hierarchical member's list
- Level Selection (e.g. geographies at Country level)
- Top/Bottom (e.g. Top 5 customers based on last year's sales)
- Condition based (e.g. 80/20 selection type)
- Comparison (e.g. Products with higher YTD sales figures compared to last year)
- Selection based on property values (e.g. Packaged products)
- String value (e.g. Customers with "Corp" in their name)
- Children or Ancestors of members at given levels.

Selection steps are combined using verbs such as "keep" to refine the selection, "add" to add new items to the selection or "remove" to suppress items based on the next selection step criterion.

The resulting selection logic can be named and saved by the user to be re-used in other reports.

Finally, a "User Selection" prompts the user for his selection on running a report.
